

The Science of Science: Mapping Loyola's Research Footprint

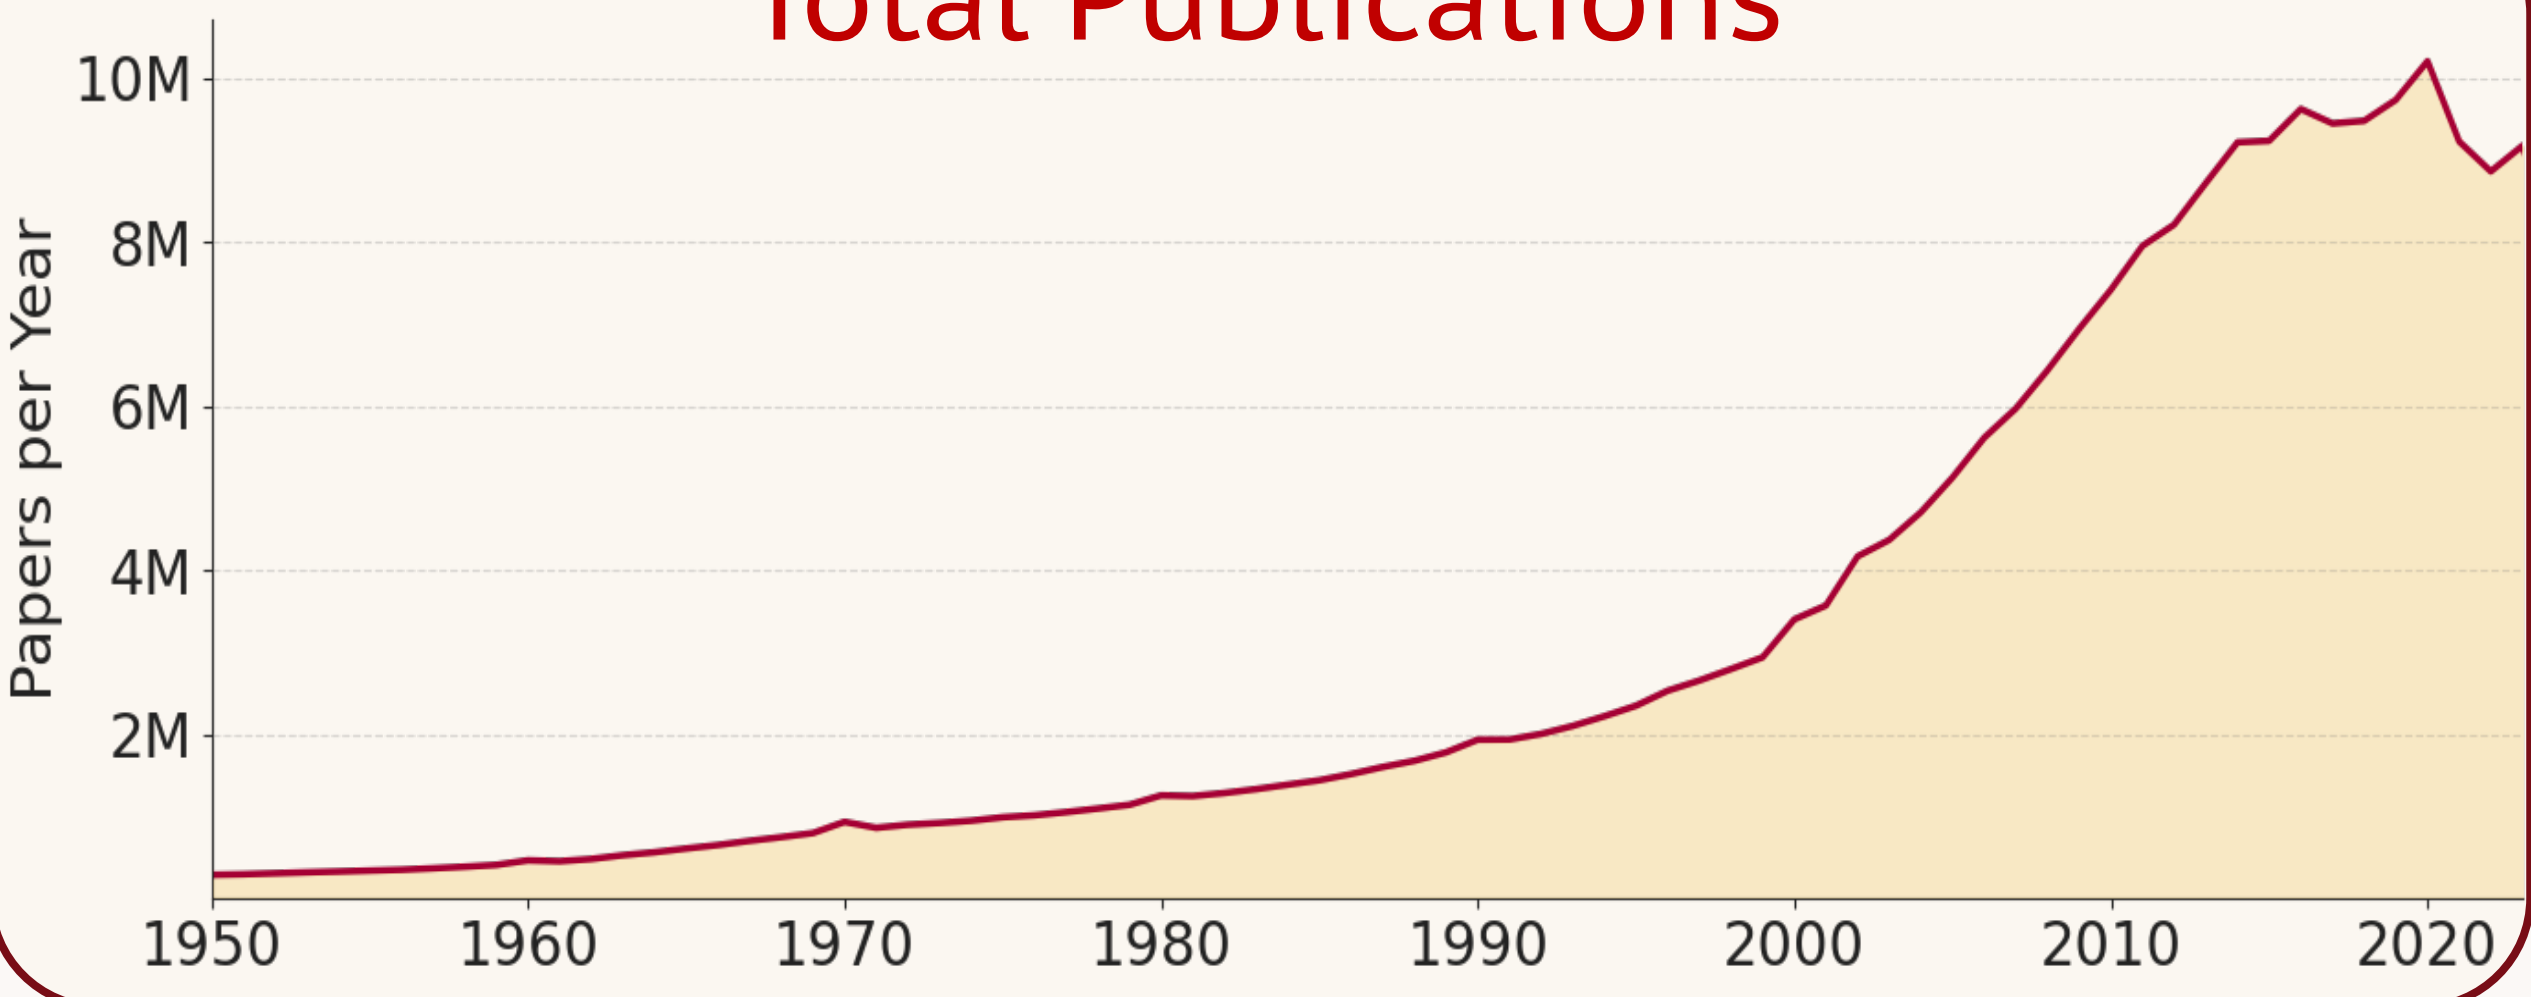

Dawson Gally Satyaki Sikdar

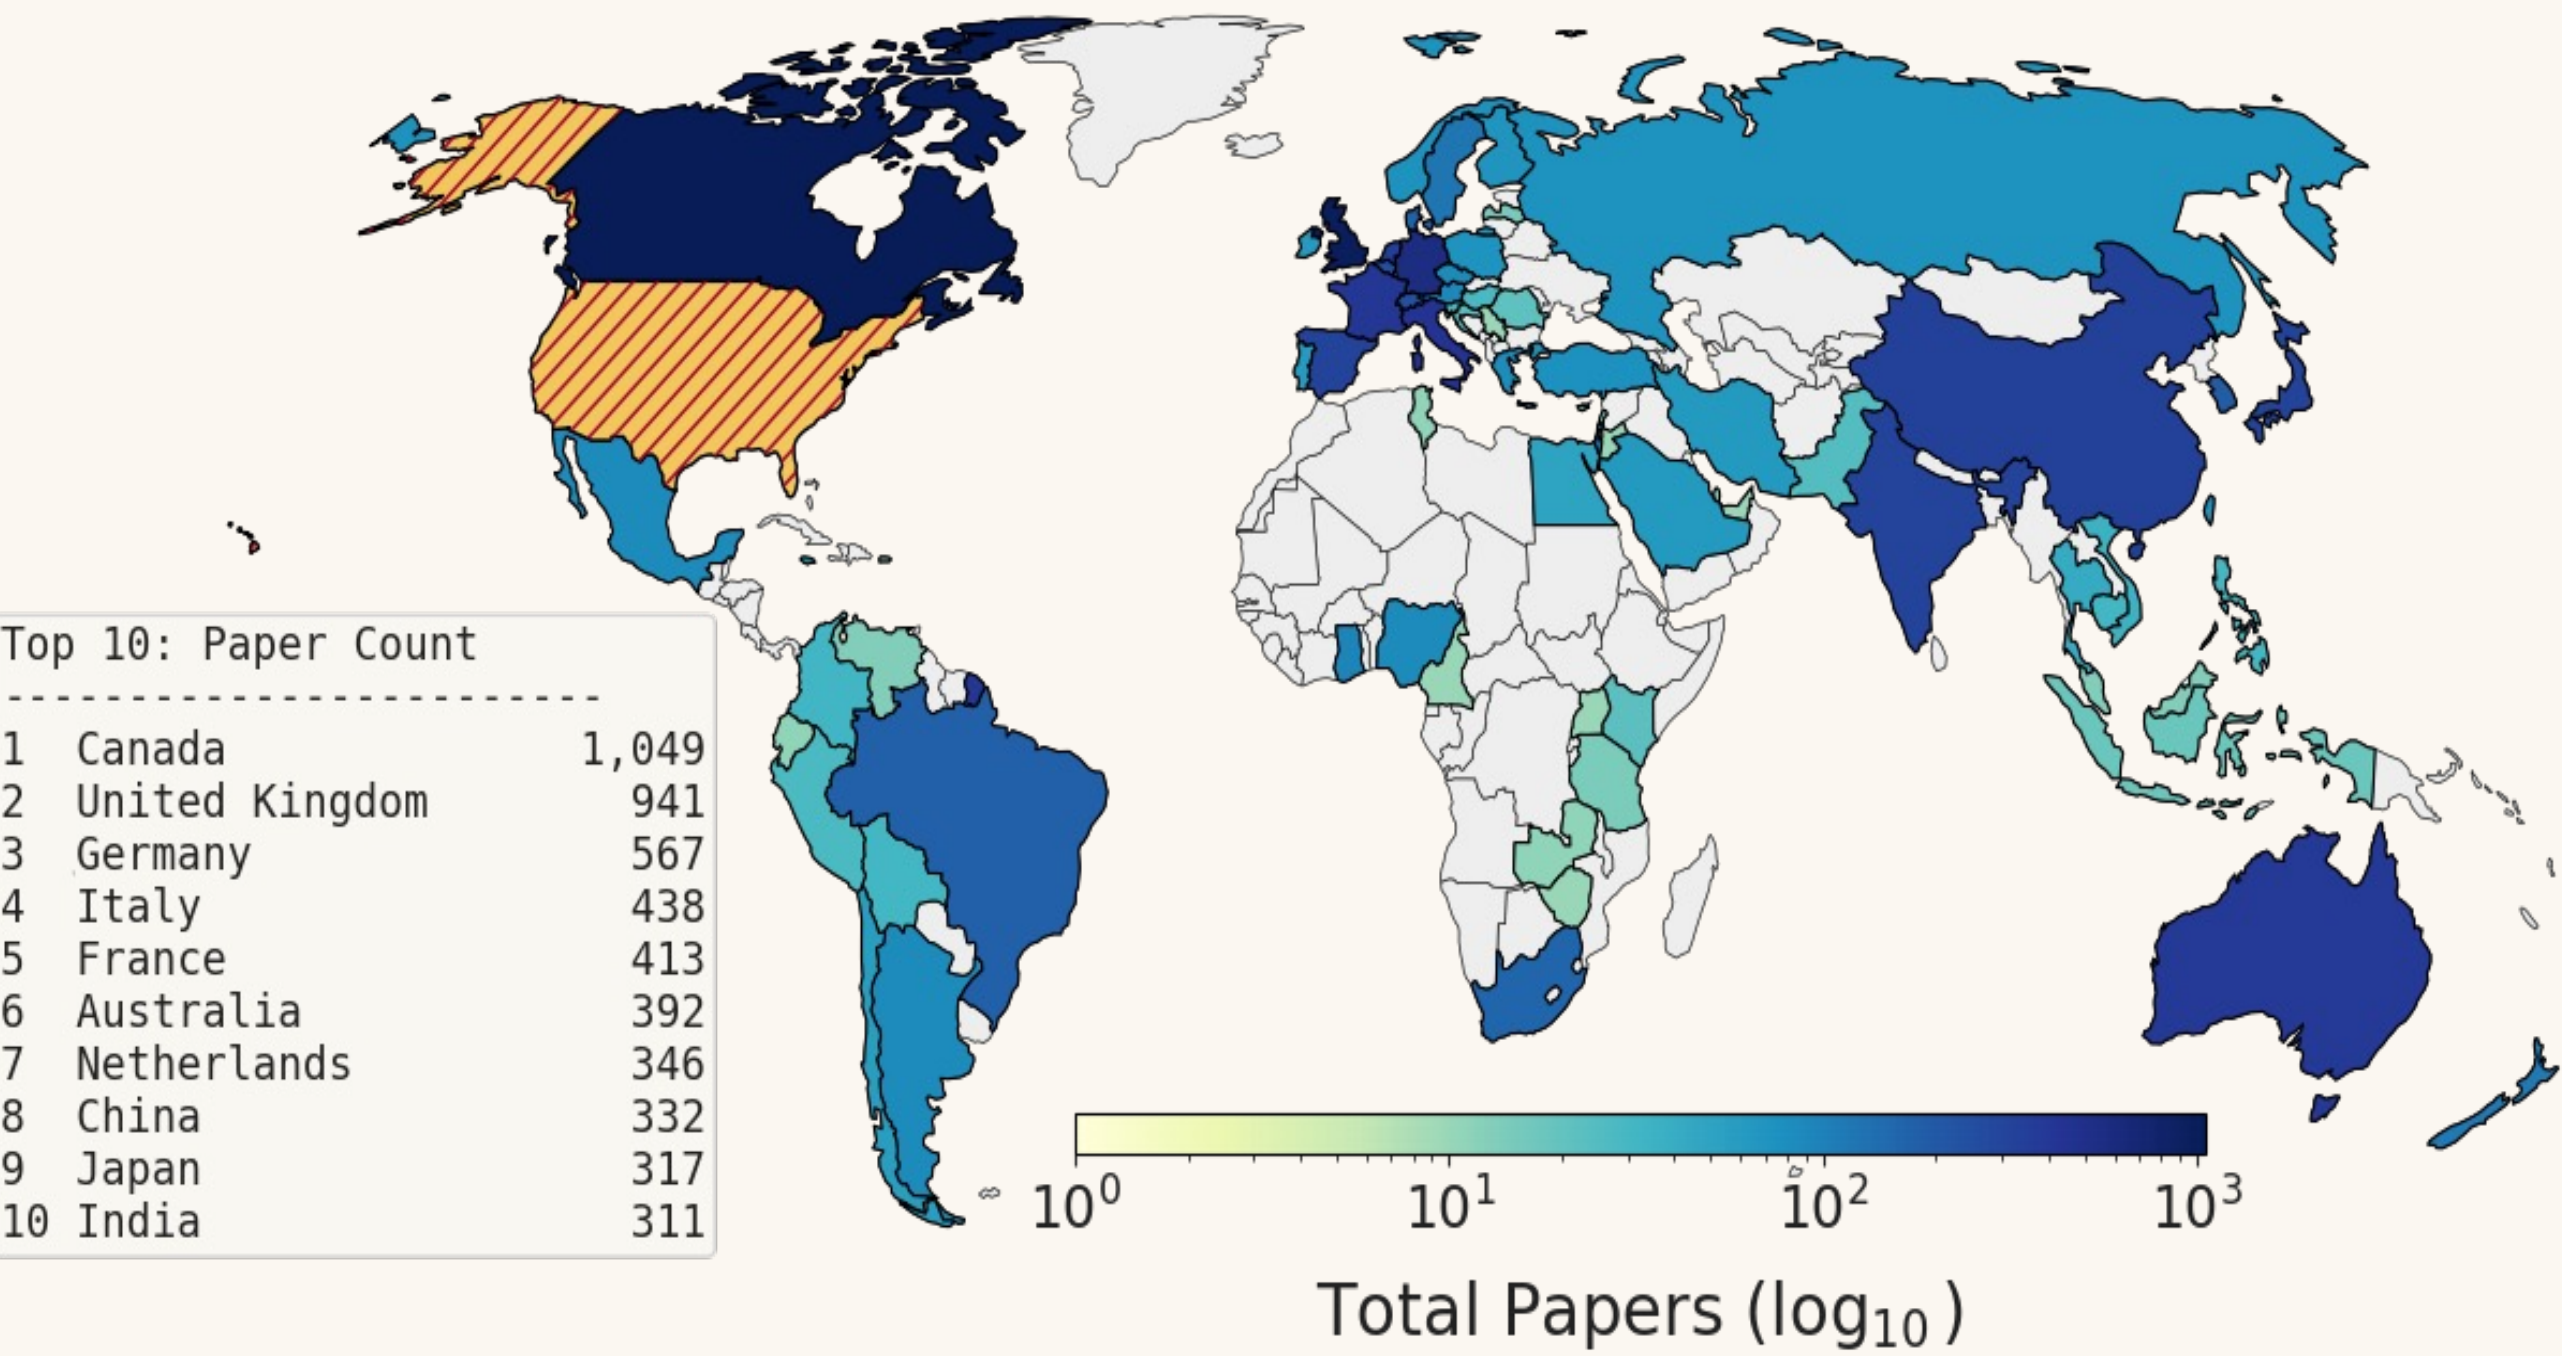

Introduction

- Scientific output has exploded globally in the last 50 years
- Fields are increasingly interdisciplinary, and ease of communication has led to global collaboration networks
- Science of Science research is essential to understand the impact of these networks and predict further growth

Loyola's Global Footprint

Collaboration Shift 2015-25

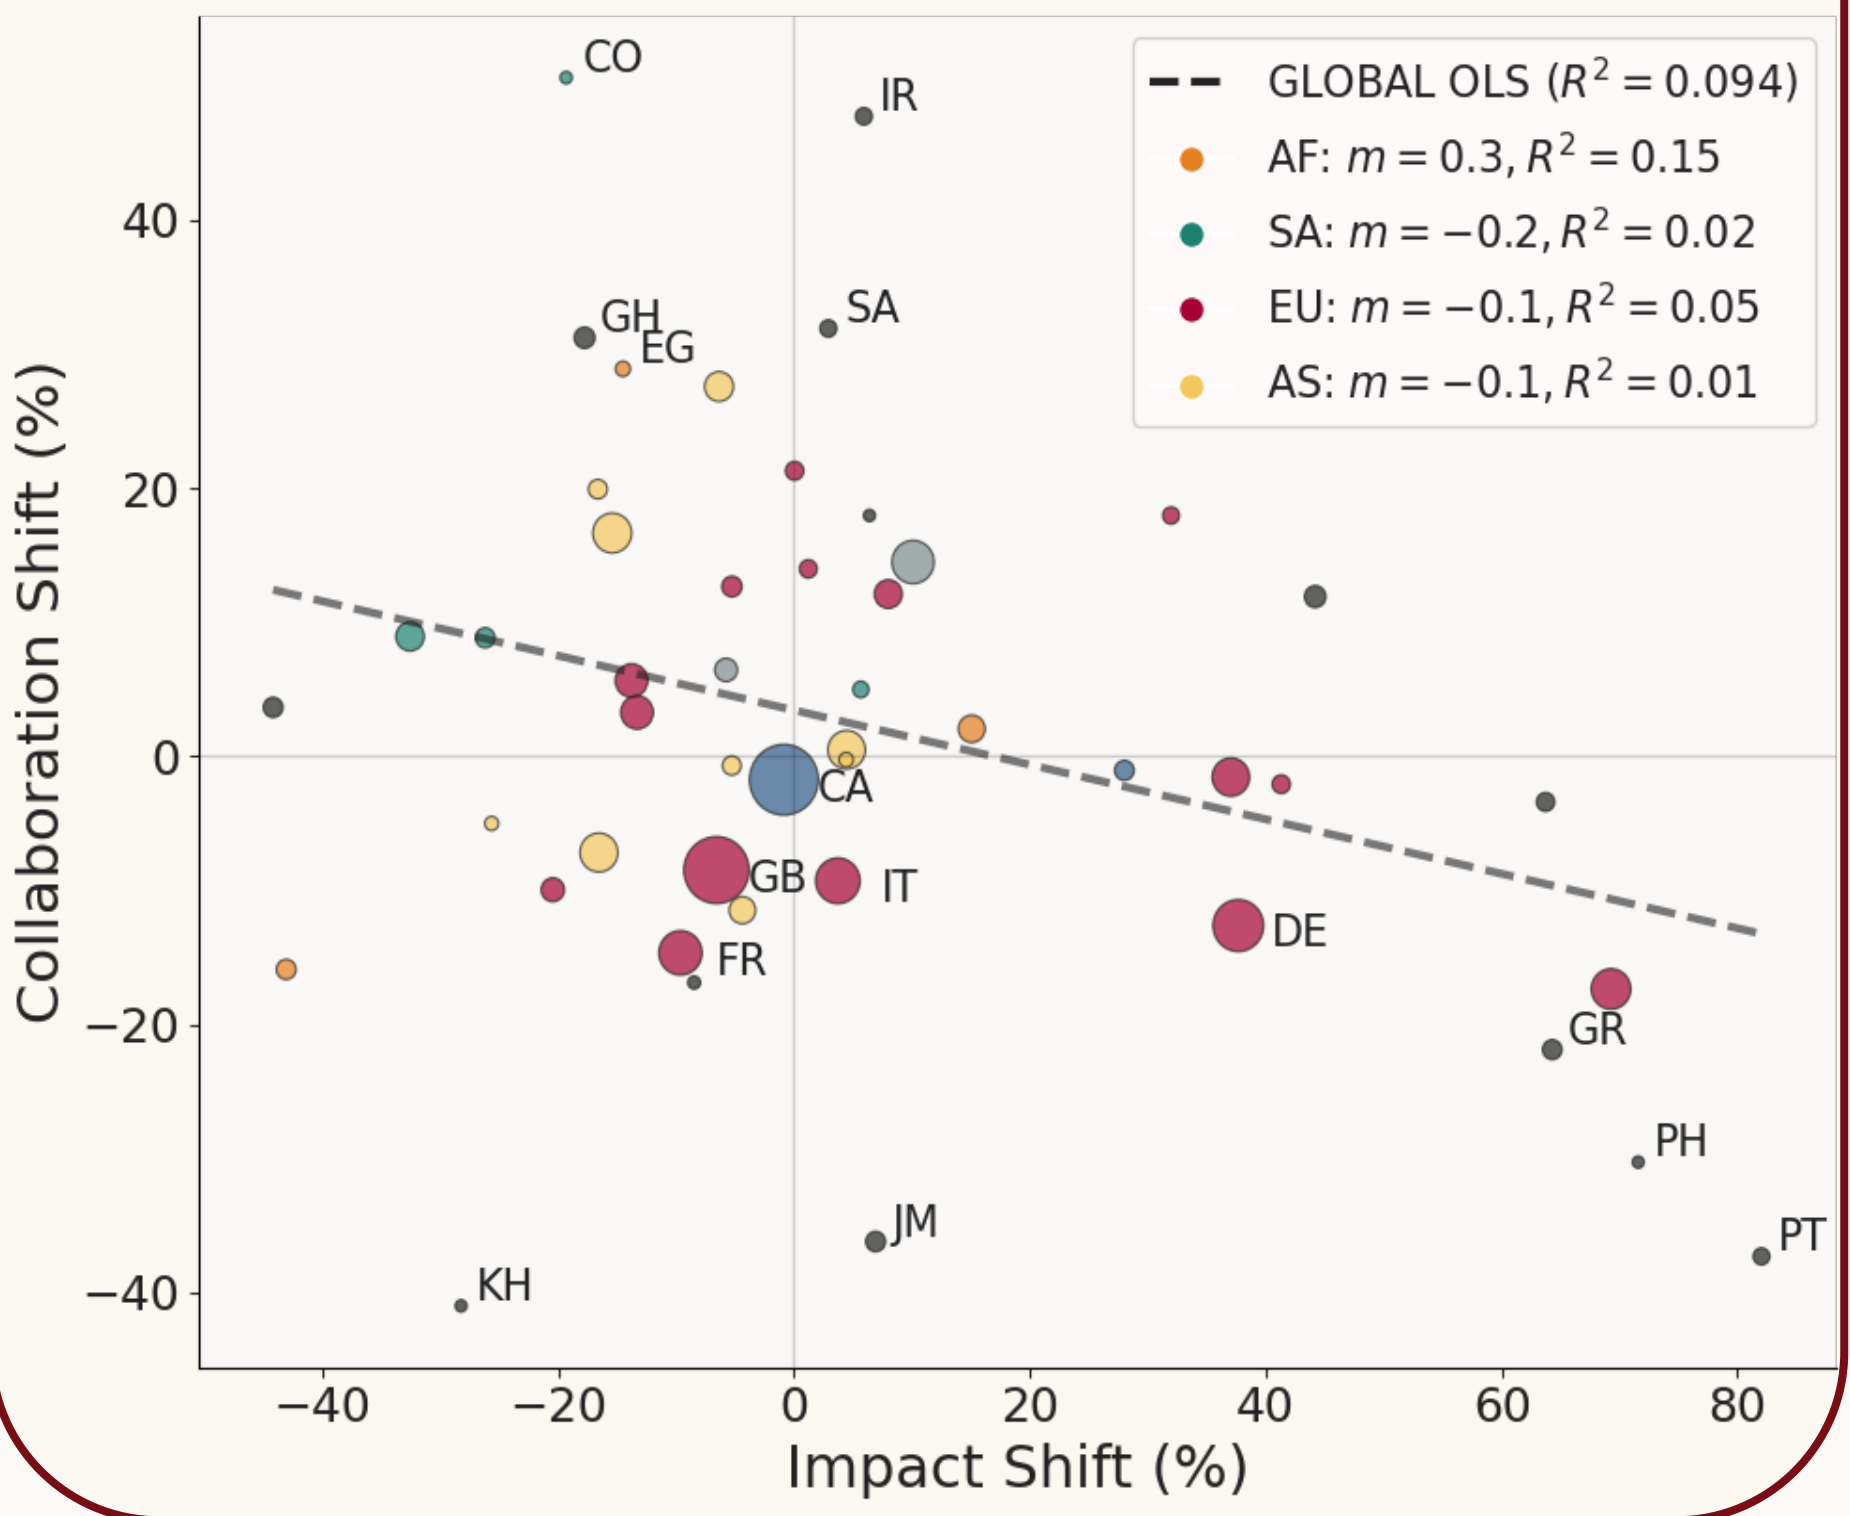

US Collaboration Network

	State	Volume	Top Institution	Paper Count	Total Citations
1	IL	30.7%	University of Chicago	4,652	139,295
2	CA	6.9%	UC San Diego	400	20,243
3	NY	5.8%	Cornell University	225	14,979
4	MA	5.3%	Harvard University	531	28,855
5	MD	4.1%	Johns Hopkins University	421	28,801
6	TX	4.0%	University of Texas MD	310	19,522
7	PA	3.7%	University of Pennsylvania	377	18,990
8	OH	3.6%	The Ohio State University	322	12,384
9	MI	2.8%	University of Michigan	582	33,963
10	NC	2.4%	University of North Carolina	350	37,065

Drivers of Growth

Main Takeaways

- Loyola's international collaborations are spread across 147 countries
- Strong collaborations with institutions located in Chicagoland and other academic hubs including Boston and the Bay Area
- Colombia and Iran have seen the highest collaboration growth in the last 10 years
- Citation impact is weakly correlated with collaboration growth

Next Steps

- Separate analysis by discipline and monitor topic switches
- Compare funding impact and publication venue visibility
- Dive deeper into drivers of growth and impact predictors
