

Agentic Orchestrator: Adaptive Routing Across Heterogeneous Scientific Workers

Aldo Malaquias Cabrera, Zhiling Lan, Michael E. Papka

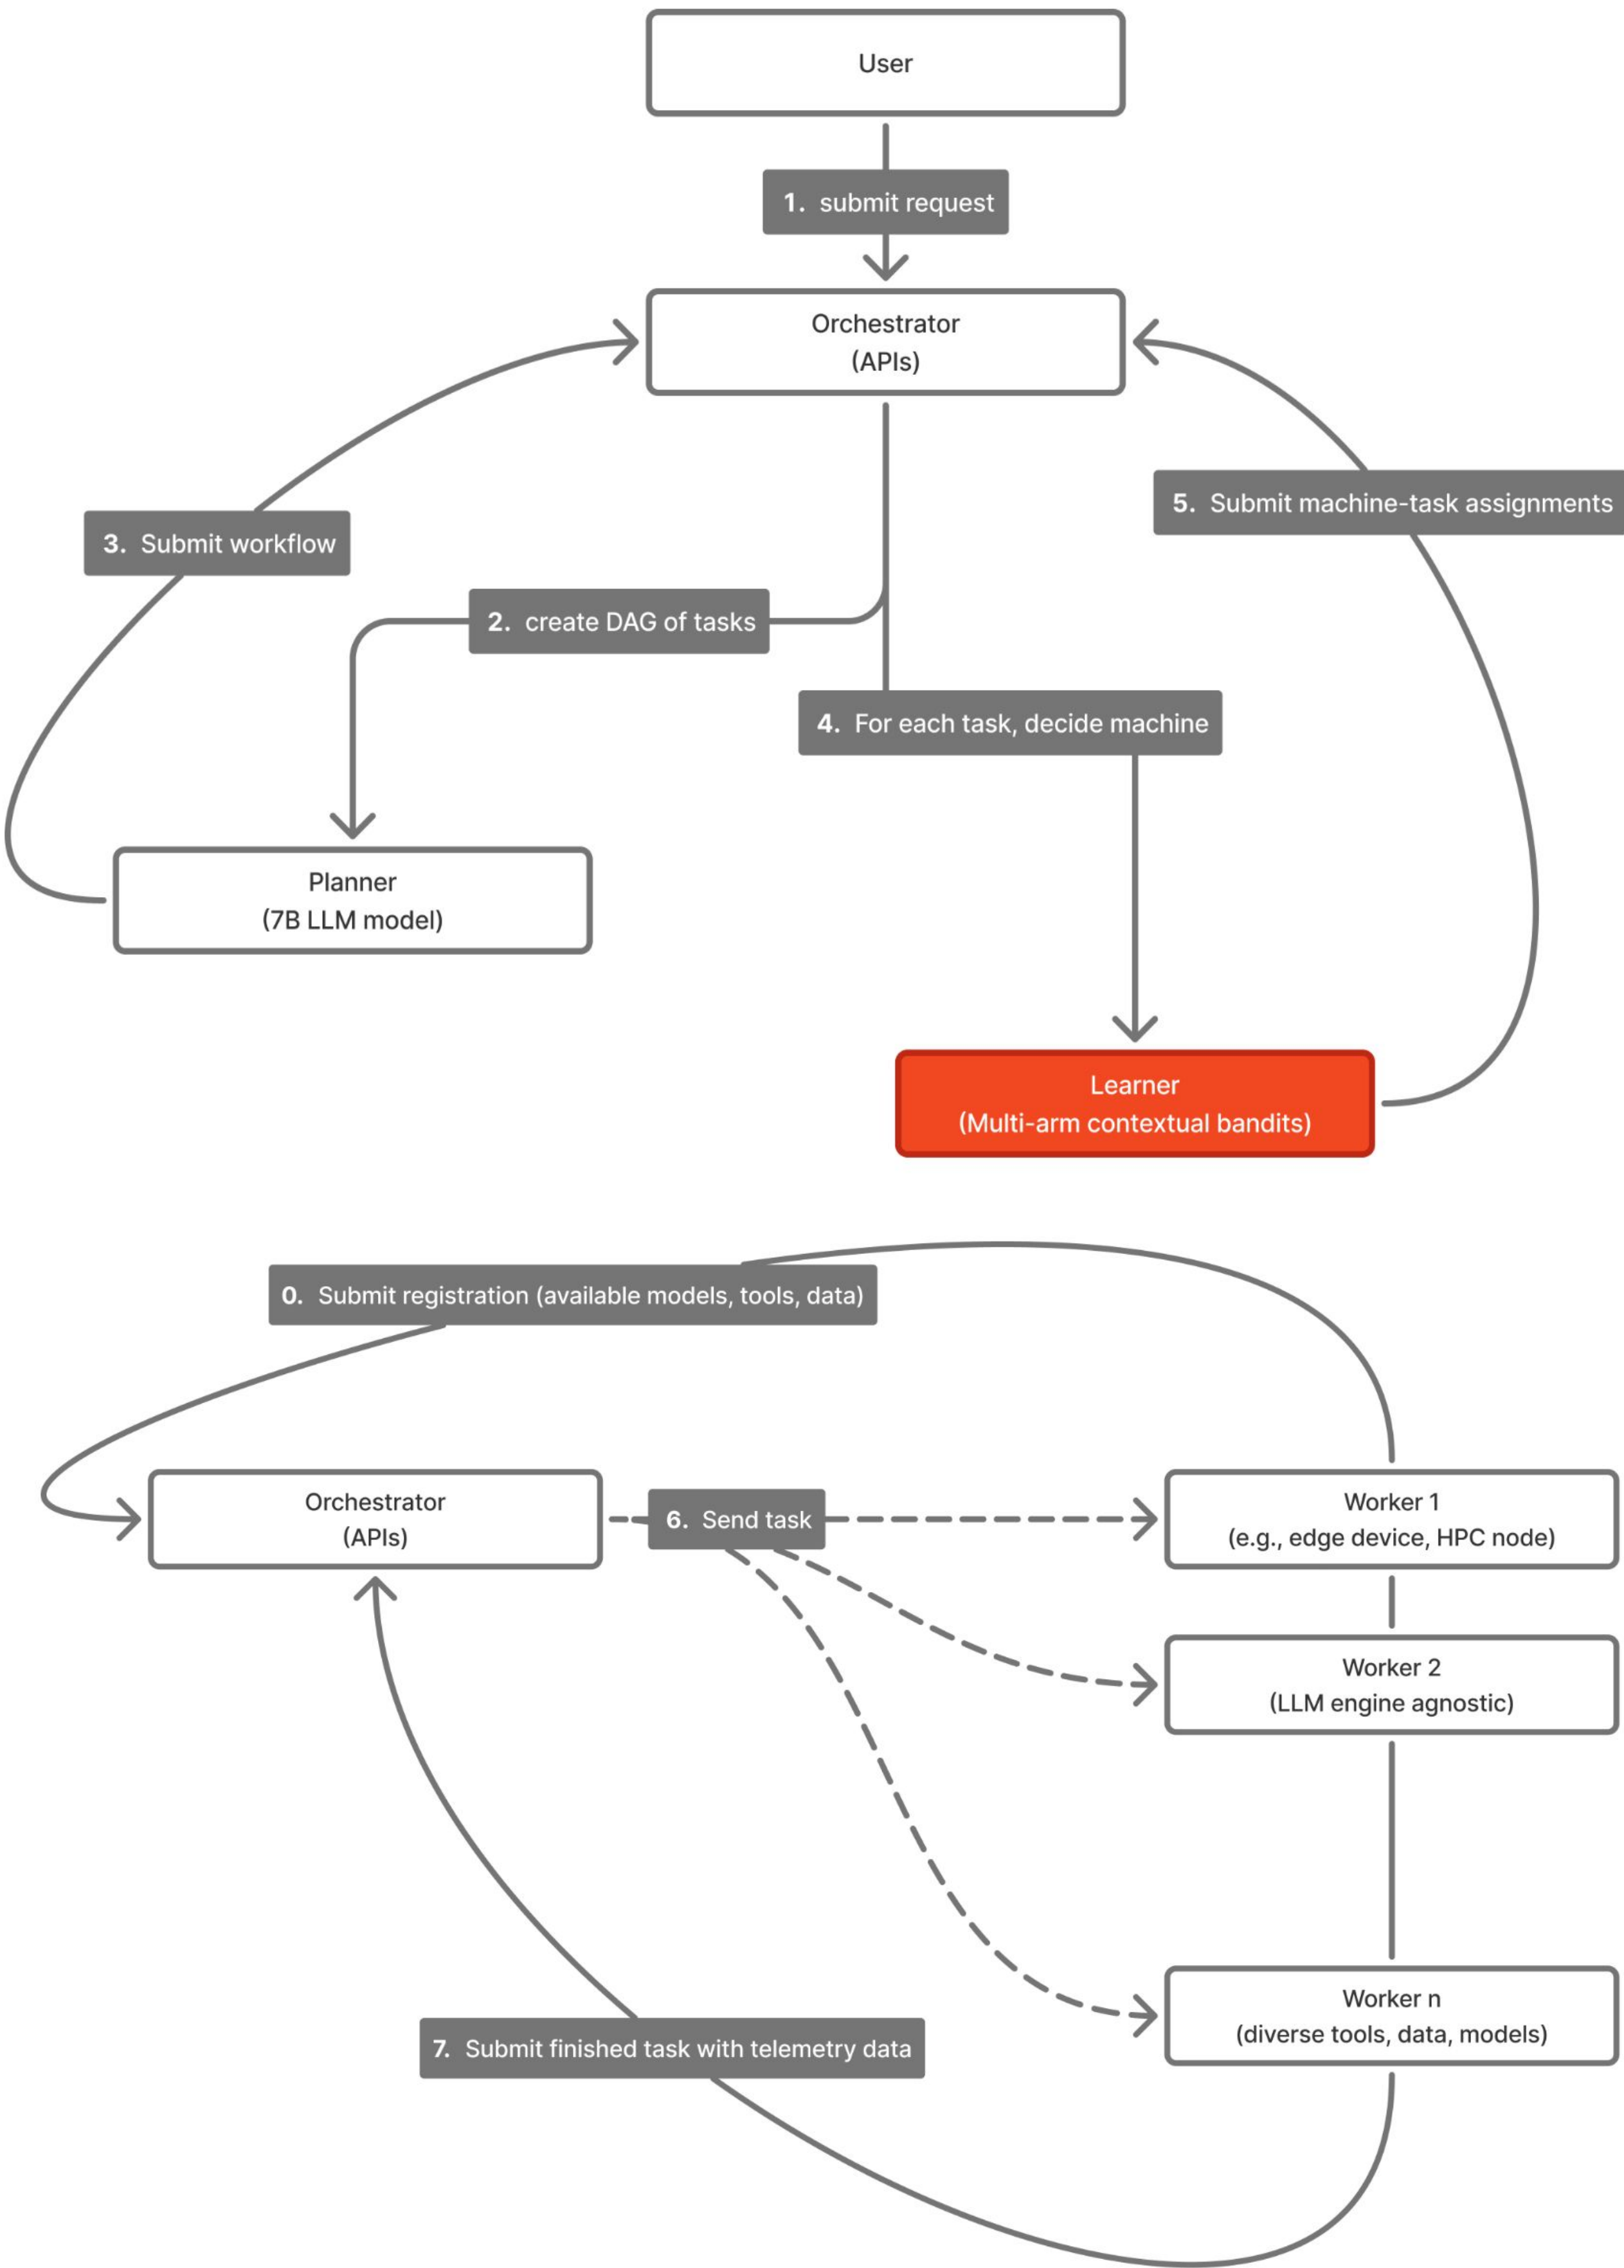

Introduction

Problem: Dynamic Inference Routing

Request -> Which machine? Which tools? Which data?
What tasks, order, and constraints?

Implementation

Planned Experimentation

Planned Experimentation

DAG Planner
correctness • minimality

Routing Baselines
CB • MAB • RL

Feedback Sensitivity
100% • 50% • 10% • 1%

Fleet Adaptation
churn • degradation

Measure: convergence • stability • reward • regret

Future Steps

Context
when helps?

Feedback
how sparse?

Weights
converge?

Decay
gamma?

Planner LLM
which model?
